Direct IO

The Direct IO network is a private network dedicated to IO traffic from our iSCSI shares. If you wish to peak into this network, your best bet is to SSH into any storage server.

The firewall blocks most traffic to/from this subnet, except for some whitelisted clients.

Network Information

- Gateway: 10.0.0.254 (gretzky)
- Subnet: 255.255.255.0 (/24)
- Known Hosts
    - 10.0.0.190 = cdr-iscsi0
    - 10.0.0.150 = cdr-iscsi1
    - 10.0.0.155 = cdr-iscsi2
    - 10.0.0.160 = cdr-iscsi3
    - 10.0.0.X = cdr-vmX IP
        - Please follow this naming convention when adding new servers
        - Example: cdr-vm1 will have the IP of 10.0.0.1
