

CSE Uplink

Woah, actual internet. This network should be treated with **extreme caution**. Any machine using this network bypasses our firewall, [gretzky](#), and goes to UB's network.

Network Information

Any machine on this network will require a static DNS address, as well as a static IP. This information must be given to the CSE IT Staff, so they can update their records. Two things to note:

- All DNS names **must** start with cdr -
- There is **no** DHCP on this network. Static IP, or get out.

Important Information

- Gateway: 128.205.44.254 (picasso.cse.buffalo.edu)
- Subnet: 255.255.255.128 (/25)
- DNS:
 - 128.205.1.100
 - 128.205.1.101
 - 128.205.1.102

To find an available IP on the subnet, use [CIT's Subnet Sweep Tool](#).
