

# UBNetDef Webserver Setup

How did I setup the ubnetdef.org webserver? Config dump too, pls.

## Troubleshooting

**ISSUE:** Installing nginx-full shows: nginx-full : Depends: libssl1.0.0 dotdeb

**FIX:** apt-get install openssl -t jessie-backports

## Config Dumps

[/etc/logrotate.d/websites](#)

```
/web/*/logs/*.log {
    daily
    missingok
    rotate 14
    compress
    delaycompress
    notifempty
    create 0640 www-data adm
    sharedscripts
    prerotate
        if [ -d /etc/logrotate.d/httpd-prerotate ]; then \
            run-parts /etc/logrotate.d/httpd-prerotate; \
        fi \
    endscript
    postrotate
        invoke-rc.d nginx rotate >/dev/null 2>&1
    endscript
}
```

[/etc/crontab](#)

```
@daily /usr/bin/certbot renew --post-hook "systemctl reload nginx" --
quiet
```

[/etc/apt/sources.list.d/dotdeb.list](#)

```
# DotDeb General
deb http://packages.dotdeb.org jessie all
```

```
deb-src http://packages.dotdeb.org jessie all  
  
# DotDeb HTTP2  
deb http://packages.dotdeb.org jessie-nginx-http2 all
```

[/etc/apt/sources.list.d/backports.list](#)

```
# Jesse Backports  
deb http://ftp.debian.org/debian jessie-backports main
```
